

SUSTAINABLE SILICON VALLEY

Creating an Ecosystem for a Carbon Balanced Planet

WHEN

Tuesday, October 18, 2016 from 4:00 PM to 7:30 PM (PDT)

WHERE

DLA PIPER – 555 MISSION STREET #2400, SAN FRANCISCO, CA 94105

Creating an Ecosystem for a Carbon Balanced Planet

Join Graciela Chichilnisky, CEO of Global Thermostat for an interactive workshop that brings together leaders from across disciplines to create tangible projects for the development of innovative carbon solutions. This workshop will explore how Bay Area business, policy, and NGO leaders can partner with local carbon removal solution developers. Workshop attendees will participate in a design charrette with the goal of identifying measurable projects. Together we will advance the development of a carbon balanced planet.

Graciela Chichilnisky is a world renowned economist and mathematician, the creator of the Carbon Market of the UN Kyoto Protocol, the concept of Basic Needs and the formal theory of Sustainable Development. She acted as Lead US Author of the Intergovernmental Panel on Climate Change, which received the Nobel Prize in 2007. Her pioneering work uses innovative market mechanisms to create Green Capitalism.

Chichilnisky is a visiting professor at Stanford University and a professor of Statistics and Economics and Columbia University. She acts as a special adviser to the UN and is the CEO and Co-Founder of Global Thermostat, a company in which she co-invented a “Carbon-Negative Technology”™ that captures CO₂ from air and transforms it into profitable assets such as biofuels, beverages and polymers.
